Care and Management of Diabetes Level 2

Course Overview

Welcome to the Care and Management of Diabetes Level 2 course, designed for healthcare professionals seeking to enhance their skills and competencies in managing diabetes. Diabetes is a chronic condition that requires careful management to prevent complications and improve quality of life.

In this course, you will learn about the different forms and causes of diabetes, the importance of careful managing and monitoring of blood glucose levels, and strategies for reducing the risk of malpractice and negligence. You will also gain a deeper understanding of the collaborative approach required for effective diabetes management, including teamwork and effective communication with other healthcare professionals.

By enrolling in this course, you will gain valuable competencies required to provide evidence of staff competency to external stakeholders, reduce the risk of malpractice and negligence, and improve your team's understanding of forms and causes of diabetes.

In conclusion, this course will equip you with advanced competencies required to manage diabetes effectively in a wide variety of care settings. Join us today and take the first step towards enhancing your diabetes management skills and providing the best possible care for your patients.

What is the cost?

As a result of government funding, this qualification is currently offered at no cost. However, please note that the number of funded places can be limited. To ensure you secure your spot, we recommend booking early.

How do learners benefit?

By taking this course, learners would gain advanced competencies to manage diabetes effectively. They would acquire a deeper understanding of diabetes management, reducing the risk of malpractice and negligence while providing evidence of staff competency to external stakeholders.

Learners would learn about the importance of careful managing and monitoring of blood glucose levels, including medication management, nutrition, and exercise, and the collaborative approach required for effective diabetes management.

These competencies would enable learners to manage diabetes in a wide variety of care settings, improving the quality of life of individuals with diabetes and providing the best possible care for their patients.
